CONTENTS

Preface ............................................................................................................... i

Marco Abate and Francesca Tovena
Formal normal forms for holomorphic maps tangent to the identity .............. 1

Assyr Abdulle
Multiscale methods for advection-diffusion problems ................................. 11

M. Agrotis, S. Lafontaine and P.G. Kevrekidis
On a discrete version of the Korteweg - De Vries equation ..................... 22

Goro Akagi
Doubly nonlinear evolution equations and Bean’s critical-state model
for type-II superconductivity .................................................................. 30

Sergei A. Avdonin and Boris P. Belinskiy
On the basis properties of the functions arising in the boundary control
problem of a string with a variable tension ........................................... 40

Soo hyun Bae
Positive entire solutions of inhomogeneous semilinear elliptic equations
with supercritical exponent .................................................................... 50

Lennard F. Bakker
Semiconjugacy of quasiperiodic flows and finite index subgroups of
multiplier groups ...................................................................................... 60

R. Bartolo, A. M. Candela and J. L. Flores
Timelike geodesics in stationary Lorentzian manifolds with unbounded
coefficients ............................................................................................... 70

R. Bartolo, A. M. Candela, J. L. Flores and A. Salvatore
Periodic trajectories in plane wave type spacetimes ................................ 77

John V. Baxley, Mary E. Cunningham and M. Kathryn McKinnon
Higher order boundary value problems with multiple solutions:
examples and techniques ........................................................................ 84

F. Bereznovskaya and G. Karev
Bifurcations of self-similar solutions of the Fokker-Plank equations .......... 91

A. V. Borisov, A. A. Killin and I. S. Mamaev
Reduction and chaotic behavior of point vortices on a plane and a sphere .... 100

A. V. Borisov, I. S. Mamaev and A. A. Killin
New periodic solutions for three or four identical vortices on a plane
and a sphere ............................................................................................... 110

M. T. Boudjelkha
Extended Riemann Bessel functions ..................................................... 121

Gastão A. Braga, Frederico Furtado and Vincenzo Isaia
Renormalization group calculation of asymptotically self-similar dynamics 131

Gunduz Caginalp and Christof Eck
Rapidly converging phase field models via second order asymptotics ....... 142

</table>
Arnaud Goullet, Ian Glasgow and Nadine Aubry
Dynamics of microfluidic mixing using time pulsing ......................... 327

John R. Graef and Bo Yang
Multiple positive solutions to a three point third order boundary
value problem .......................................................... 337

E. V. Grigorieva and E. N. Khailov
Optimal control of a commercial loan repayment plan ...................... 345

Daniel Guo and John Drake
A global semi-Lagrangian spectral model of shallow water equations
with time-dependent variable resolution .................................... 355

Scott W. Hansen and Rajeev Rajaram
Riesz basis property and related results for a Rao-Nakra sandwich beam...... 365

Takahiro Hashimoto
Nonexistence of positive solutions of quasilinear elliptic equations with
singularity on the boundary in strip-like domains ............................ 376

Min He
A class of integrodifferential equations and applications .................... 386

Hiroshi Inoue
Magnetic hydrodynamics equations in moving boundaries .................... 397

Miklós Horváth and Márton Kiss
A bound for ratios of eigenvalues of Schrödinger operators on the
real line ............................................................................. 403

Cheng-Hsiung Hsu and Suh-Yuh Yang
Traveling wave solutions in cellular neural networks with multiple
time delays ........................................................................ 410

Ying Sue Huang and Chai Wah Wu
Stability of cellular neural network with small delays ......................... 420

J. Húska, P. Poláčik and M. V. Safonov
Principal eigenvalues, spectral gaps and exponential separation between
positive and sign-changing solutions of parabolic equations ................. 427

Gennaro Infante
Eigenvalues and positive solutions of ODEs involving integral
boundary conditions .......................................................... 436

Michinori Ishiwata
Existence of a stable set for some nonlinear parabolic equation
involving critical Sobolev exponent ........................................... 443

Michael A. Jones and Diana M. Thomas
Nim-induced dynamical systems over \( \mathbb{Z}_2 \) ........................................ 453

S. Kanagawa, K. Inoue, A. Arimoto and Y. Saisho
Mean square approximation of multi dimensional reflecting fractional
Brownian motion via penalty method .......................................... 463

N. I. Karachalios, H. E. Nistazakis and A. N. Yannacopoulos
Remarks on the asymptotic behavior of solutions of complex discrete
Ginzburg-Landau equations ....................................................... 476
Accounting for nonlinearities in mathematical modelling of quantum dot molecules ........................................ 642

Emil Minchev
Existence and uniqueness of solutions of a system of nonlinear PDE for phase transitions with vector order parameter ......................... 652

F. Minhós, T. Gyulov and A.I. Santos
Existence and location result for a fourth order boundary value problem .... 662

Maria Grazia Naso
Controllability to trajectories for semilinear thermoelastic plates ........... 672

Igor Nazarov and Bai-Lian Li
Maximal sustainable yield in a multipatch habitat ................................ 682

P.K. Newton
The dipole dynamical system .................................................... 692

Tomasz Nowicki and Grzegorz Świrszcz
Neutral one-dimensional attractor of a two-dimensional system derived from Newton’s means ............................................ 700

Simone Paleari and Tiziano Penati
Equipartiton times in a Fermi-Pasta-Ulam system ............................ 710

Chuang Peng
Minimum degrees of polynomial models on time series .................... 720

David W. Pravica and Michael J. Spurr
Unique summing of formal power series solutions to advanced and delayed differential equations ............................................. 730

Yuanwei Qi
Anomalous exponents and RG for nonlinear diffusion equations ............ 738

Rajeev Rajaram and Scott W. Hansen
Null controllability of a damped Mead-Markus sandwich beam ............ 746

Vassilis M. Rothos
Subharmonic bifurcations of localized solutions of a discrete NLS equation .......................................................... 756

E. Sander, E. Barreto, S.J. Schiff and P. So
Dynamics of noninvertibility in delay equations ................................ 768

Henri Schurz
Dissipation of mean energy of discretized linear oscillators under random perturbations ........................................... 778

Stephen P. Shipman and Darko Volkov
Existence of guided modes on periodic slabs .................................. 784

Qin Sheng, David A. Voss and Abdul Q. M. Khaliq
An adaptive splitting algorithm for the Sine-Gordon equation .............. 792

Junping Shi and Ratnasingham Shivaji
Semilinear elliptic equations with generalized cubic nonlinearities ........ 798
LieJune Shiau and Roland Glowinski
Operator splitting method for friction constrained dynamical systems ....... 806

Irina F. Sivergina and Michael P. Polis
About global null controllability of a quasi-static thermoelastic contact system ......................................................... 816

Milena Stanislavova
On the global attractor for the damped Benjamin-Bona-Mahony equation .... 824

Jianjun Tian and Xiao-Song Lin
Colored coalescent theory ............................................................ 833

Bourama Toni
Upper bounds for limit cycle bifurcation from an isochronous period annulus via a birational linearization ....................... 846

Edward Della Torre and Lawrence H. Bennett
Analysis and simulations of magnetic materials .............................. 854

Thomas I. Vogel
Comments on radially symmetric liquid bridges with inflected profiles ....... 862

Michio Urano, Kimie Nakashima and Yoshio Yamada
Transition layers and spikes for a reaction-diffusion equation with bistable nonlinearity .................................................. 868

Haiyan Wang
Positive radial solutions for quasilinear equations in the annulus .......... 878

Hwai-Chiuan Wang
Stability and symmetry breaking of solutions of semilinear elliptic equations . 886

J. R. L. Webb
Multiple positive solutions of some nonlinear heat flow problems .......... 895

Qinglan Xia
An application of optimal transport paths to urban transport networks ...... 904

X. Xiang, Y. Peng and W. Wei
A general class of nonlinear impulsive integral differential equations and optimal controls on Banach spaces .............................. 911

Noriaki Yamazaki
Doubly nonlinear evolutions equations associated with elliptic-parabolic free boundary problems ....................................... 920

Suh-Yuh Yang and Cheng-Hsiung Hsu
Existence of monotonic traveling waves in modified RTD-based cellular neural networks ............................................... 930

Jian Zhai, Jianping Fang and Lanjun Li
Wave map with potential and hypersurface flow ................................ 940

Chunlei Zhang, Qin Sheng and Rauul Ordóñez
Notes on the convergence and applications of surrogate optimization ....... 947
