

CONTENTS

G. Akagi, J. Kobayashi, and M. Ôtani Principle of symmetric criticality and evolution equations	1
Goro Akagi and Mitsuharu Ôtani Evolution equations and subdifferentials in Banach spaces	11
Carlo Alabiso and Mario Casartelli Quasi normal modes in stochastic domains	21
Ernesto Aranda and Pablo Pedregal Constrained envelope for a general class of design problems	30
M. R. Arias and R. Bentez Properties of solutions for nonlinear Volterra integral equations	42
Yury Arlinskiĭ and Eduard Tsekanovskiĭ Constant J-unitary factor and operator-valued transfer functions	48
Sergei A. Avdonin and Boris P. Belinskiy Controllability of a string under tension	57
Lennard F. Bakker A reducible representation of the generalized symmetry group of a quasiperiodic flow	68
Crstina M. Ballantine Ramanujan type graphs and bigraphs	78
John V. Baxley and Philip T. Carroll Nonlinear boundary value problems with multiple positive solutions	83
Boris P. Belinskiy and Peter Caithamer Stochastic stability of some mechanical systems with a multiplicative white noise	91
H. Bereketoglu and M. Pituk Asymptotic constancy for delay equations	100
Ping Bi and Maoan Han Oscillation of second order difference equations with advanced argument	108
Joseph A. Biello, Peter R. Kramer and Yuri Lvov Stages of energy transfer in the fpu model	113
Lora Billings, Erik Bollt, David Morgan and Ira B. Schwartz Stochastic global bifurcation in perturbed Hamiltonian systems	123
H.W. Broer, A. Hagen and G. Vegter Numerical approximation of normally hyperbolic invariant manifolds	133
Daria Bugajewska and Mirosława Zima On positive solutions of nonlinear fractional differential equations	141
Dariusz Bugajewski and Mirosława Zima On the spectral radius of linearly bounded operators and existence results for functional-differential equations	147
G. Calafiore and M. C. Campi A learning theory approach to the construction of predictor models	156

T. Candan and R. S. Dahiya	
Oscillation of mixed neutral differential equations with forcing term	167
A. M. Candela, J. L. Flores and M. Sánchez	
A quadratic Bolza-type problem in a non-complete Riemannian manifold	173
Hongwei Chen	
Blow-up estimates of positive solutions of a reaction-diffusion system	182
Jorge Cortés	
Energy conserving nonholonomic integrators	189
Casey T. Cremins	
Existence theorems for weakly inward semilinear operators	200
Yu. Dabaghian, R. V. Jensen and R. Blümel	
Integrability in 1D quantum chaos	206
M. DeDeo, M. Martínez, A. Medrano, M. Minei, H. Stark and A. Terras	
Spectra of Heisenberg graphs over finite rings	213
M. Delgado-Téllez and A. Ibort	
On the geometry and topology of singular optimal control problems and their solutions	223
Joshua Z. Du	
Kelvin-Helmholtz instability waves of supersonic multiple jets	234
Kurt Ehlers	
Geometric equivalence on nonholonomic three-manifolds	246
R. H. Fabiano and J. Turi	
Making the numerical abscissa negative for a class of neutral equations	256
Wenying Feng	
Solutions and positive solutions for some three-point boundary value problems	263
Daniel Franco and Donal O'Regan	
Existence of solutions to second order problems with nonlinear boundary conditions	273
M. L. Frankel and V. Roytburd	
Fractal dimension of attractors for a stefan problem	281
Harald Friedrich	
Semiclassical and large quantum number limits of the Schrödinger equation	288
M. F. Furtado, L. A. Maia and E. A. B. Silva	
Systems with coupling in r^N for a class of noncoercive potentials	295
Cédric Galusinski and Serguei Zelik	
Uniform gevrey regularity for the attractor of a damped wave equation	305
Marta Garcia-Huidobro and Raul Manásevich	
A three point boundary value problem containing the operator $-(\phi(u'))'$	313
Leszek Gasiński	
Optimal control problem of bolza-type for evolution hemivariational inequality	320
Filippo Gazzola	
Critical exponents which relate embedding inequalities with quasilinear elliptic problems	327

Filippo Gazzola and Lorenzo Pisani	
Remarks on quasilinear elliptic equations as models for elementary particles ..	336
J. R. Graef, R. Savithri and E. Thandapani	
Oscillatory properties of third order neutral delay differential equations	342
Maurizio Grasselli and Vittorino Pata	
On the damped semilinear wave equation with critical exponent	351
E. V. Grigorieva and E. N. Khailov	
A nonlinear controlled system of differential equations describing the process of production and sales of a consumer good	359
Guo Ben-yu and Wang Zhong-qing	
Modified chebyshev rational spectral method for the whole line	365
D. Guo and J. Drake	
A global semi-lagrangian spectral model for the reformulated shallow water equations	375
Manuel Gutiérrez	
Lorentz geometry technique in nonimaging optics	386
Takahiro Hashimoto	
Existence and nonexistence of nontrivial solutions of some nonlinear fourth order elliptic equations	393
Min He	
On continuity in parameters of integrated semigroups	403
J. William Hoffman	
Remarks on the zeta function of a graph	413
S. Huff, G. Olumolode, N. Pennington and A. Peterson	
Oscillation of an Euler-Cauchy dynamic equation	423
Gennaro Infante	
Positive solutions of differential equations with nonlinear boundary conditions	432
H. Inoue, K. Matsuura and M. Ôtani	
Strong solutions of magneto-micropolar fluid equation	439
Harry L. Johnson and David L. Russell	
Transfer function approach to output specification in certain linear distributed parameter systems	449
P. M. Jordan and P. Puri	
Some recent findings concerning unsteady dipolar fluid flows	459
S. Kawashima, S. Nishibata and M. Nishikawa	
Asymptotic stability of stationary waves for two-dimensional viscous conservation laws in half plane	469
C. M. Khaliq and G. S. Pai	
Conservation laws and invariant solutions for soil water equations	477
Peter R. Kramer, Joseph A. Biello and Yuri V. Lvov	
Application of weak turbulence theory to FPU model	482
Helmut Kröger	
From quantum action to quantum chaos	492
K. Q. Lan	
Multiple positive eigenvalues of conjugate boundary value problems	

with singularities	501
Bavo Langerock	
Optimal control problems with variable endpoints	507
David Lannes	
Consistency of the KP approximation	517
M. Lazzo	
Existence and multiplicity results for a class of nonlinear elliptic problems in \mathbb{R}^N	526
Dung Le	
Exponential attractors for a chemotaxis growth system on domains of arbitrary dimension	536
U. Ledzewicz and H. Schättler	
Optimal controls for a 3-compartment model for cancer chemotherapy with quadratic objective	544
Timothy J. Lewis	
Phase-locking in electrically coupled non-leaky integrate-and-fire neurons	554
Gary M. Lieberman	
Nonlocal problems for quasilinear parabolic equations in divergence form	563
Torsten Lindström	
Discrete models and Fisher's maximum principle in Ecology	571
E. Liz, V. Tkachenko and S. Trofimchuk	
Yorke and Wright $3/2$ -stability theorems from a unified point of view	580
Chunqing Lu	
Asymptotic solutions of a nonlinear equation	590
Harald Markum and Rainer Pullirsch	
Classical and quantum chaos in fundamental field theories	596
Sikimeti Ma'u and P. Ramankutty	
An averaging method for the Helmholtz equation	604
R. V. N. Melnik, N. Song and P. Sandholdt	
Dynamics of torque-speed profiles for electric vehicles and nonlinear models based on differential-algebraic equations	610
Mariusz Michta	
On solutions to stochastic differential inclusions	618
Ronald E. Mickens	
Positivity preserving discrete model for the coupled ODE's modeling glycolysis	623
Alain Miranville	
Existence of solutions for Cahn-Hilliard type equations	630
H. Mizuno and I. Sato	
L -functions and the selberg trace formulas for semiregular bipartite graphs ...	638
Octavian G. Mustafa and Yuri V. Rogovchenko	
Existence of square integrable solutions of perturbed nonlinear differential equations	647
Kayvan Najarian	
On stochastic stability of dynamic neural models in presence of noise	656

Matías Navarro and F. Sánchez-Bringas Dynamics of principal configurations near umbilics for surfaces in \mathbb{R}^4	664
Gaston N'Guerekata On weak-almost periodic mild solutions of some linear abstract differential equations	672
Sam Northshield Quasi-regular graphs, cogrowth, and amenability	678
Rafael Ortega and James Robert Ward Jr. A semilinear elliptic system with vanishing nonlinearities	688
Chun-Gil Park Stability of a linear functional equation in Banach modules	694
Paweł Pilarczyk Topological-numerical approach to the existence of periodic trajectories in ODE's	701
David W. Pravica and Michael J. Spurr Analytic continuation into the <i>future</i>	709
Dalibor Pražák Exponential attractor for the delayed logistic equation with a nonlinear diffusion	717
Maria Alessandra Ragusa Parabolic systems with non continuous coefficients	727
Vladimír Răsvan On the central λ -stability zone for linear discrete-time Hamiltonian systems ..	734
P. Rinaldi and H. Schättler Minimization of the base transit time in semiconductor devices using optimal control	742
Kimun Ryu and Inkyung Ahn On certain elliptic systems with nonlinear self-cross diffusions	752
Felix Sadyrbaev Nonlinear boundary value problems of the calculus of variations	760
Yasuhisa Saito A global stability result for an N -species Lotka-Volterra food chain system with distributed time delays	771
A. Salvatore Multiple homoclinic orbits for a class of second order perturbed Hamiltonian systems	778
Barbara A. Shipman Compactified Isospectral Sets of Complex Tridiagonal Hessenberg Matrices ...	788
Ken Shirakawa Asymptotic stability for dynamical systems associated with the one-dimensional Frémond model of shape memory alloys	798
Eugenii Shustin Exponential decay of oscillations in a multidimensional delay differential system	809
Michael W. Smiley and Howard A. Levine Numerical simulation of capillary formation during the onset of	

tumor angiogenesis	817
Jędrzej Sniatycki	
Integral curves of derivations locally semi-algebraic differential spaces	827
Meiyu Su	
True laminations for complex h�enon maps	834
Emmanuel Tr�elat	
Optimal control of a space shuttle, and numerical simulations	842
Konstantina Trivisa	
Global existence and asymptotic analysis of solutions to a model for the dynamic combustion of compressible fluids	852
Larry Turyn	
Cellular neural networks:asymmetric templates and spatial chaos	864
C. Van der Mee and S. Vernier-Piro	
Travelling waves for solid-gas reaction-diffusion systems	872
Cheng Wang	
The primitive equations formulated in mean vorticity	880
Dehua Wang	
Global existence and dynamical properties of large solutions for combustion flows	888
D. Scott Warren and Kayvan Najarian	
Learning theory applied to sigmoid network classification of protein biological function using primary protein structure	898
J. R. L. Webb	
Remarks on positive solutions of some three point boundary value problems dynamical systems	905
Wen-Qing Xu	
Boundary conditions for multi-dimensional hyperbolic relaxation problems ...	916
Xiangjin Xu	
Multiple solutions of super-quadratic second order	926
Noriaki Yamazaki	
Global attractors for non-autonomous multivalued dynamical systems associated with double obstacle problems	935
Ming Yang and Chulin Li	
Valuing investment project in competitive environment	945
Tianliang Yang and J. M. McDonough	
Solution filtering technique for solving Burgers' equation	951
S. Zelik	
Formally gradient reaction-diffusion systems in R^n have zero spatio-temporal topological entropy	960
Dmitry V. Zenkov	
Linear conservation laws of nonholonomic systems with symmetry	967
