# Contents

<b>1</b>	<b>Preface</b> .....	1
	1.1 Origins .....	2
	1.2 What's new in the second edition .....	3
	1.3 Acknowledgements .....	3
	1.4 A note about zombies .....	4
<hr/>		
<b>I</b>	<b>Introductory material</b>	
<hr/>		
<b>2</b>	<b>Introduction</b> .....	9
<b>3</b>	<b>Fitting curves to data</b> .....	13
	3.1 Model fitting vs. interpolation .....	13
	3.2 Sources of error in the modelling process .....	17
	3.3 Visual fitting with the original data .....	18
	3.4 Transforming the data .....	20
	3.4.1 Regression coefficients can be misleading .....	23
	3.4.2 Transformations can also be misleading .....	23
	3.5 Lab work .....	28
	3.5.1 Exercises .....	30
<b>4</b>	<b>Splines</b> .....	33
	4.1 Spline interpolation .....	33
	4.2 Linear splines .....	34
	4.3 Cubic splines .....	36
	4.3.1 An example .....	38
	4.3.2 Generalising .....	41
	4.4 Lab work .....	41
	4.4.1 Exercises .....	41

<b>5</b>	<b>Simple epidemic models</b>	45
5.1	SIS epidemic	45
5.1.1	Solving directly	48
5.1.2	Phase portraits	50
5.2	SIR epidemics	54
5.3	Lab work	56
5.3.1	Exercises	59
<b>6</b>	<b>Calculating <math>R_0</math></b>	63
6.1	Threshold parameters	63
6.2	The method of Anderson & May	64
6.3	The Jacobian	65
6.3.1	The SIS model threshold	67
6.3.2	The endemic equilibrium for the SIS model	68
6.3.3	The SIR model threshold	69
6.3.4	The endemic equilibrium for the SIR model	70
6.4	Other methods for calculating $R_0$	71
6.4.1	Survival function	71
6.4.2	Next-generation method	72
6.4.3	Average age at infection	75
6.4.4	The final-size equation	76
6.4.5	Calculation from the intrinsic growth rate	76
6.5	Vectorial capacity	77
6.6	Lab work	78
6.6.1	Exercises	78
<b>7</b>	<b>A vector-borne disease with lifelong immunity</b>	81
7.1	Building a vector-borne disease model	81
7.2	Finding eigenvalues	83
7.3	Deriving a threshold condition	84
7.3.1	The Routh–Hurwitz criterion	85
7.4	Total population behaviour	86
7.5	Lab work	87
7.5.1	Exercises	89
<b>8</b>	<b>The spread of measles</b>	93
8.1	The Conservation Law	93
8.1.1	Diffusion	96
8.2	Measles in a corridor	97
8.3	Lab work	99
8.3.1	Exercises	106

<b>9</b>	<b>Solving Partial Differential Equations</b> .....	109
9.1	Separation of variables .....	109
9.2	Boundary conditions .....	112
9.3	Initial conditions .....	113
9.4	Lab work .....	114
9.4.1	Exercises .....	114
<b>10</b>	<b>The discrete logistic equation</b> .....	117
10.1	Developing a nonlinear model .....	117
10.1.1	Spatial limitations .....	117
10.1.2	Difference equations .....	118
10.2	Cobwebbing .....	121
10.2.1	Stability in the discrete logistic equation .....	123
10.2.2	More complex behaviour .....	124
10.3	Lab work .....	126
10.3.1	Exercises .....	128
<b>11</b>	<b>Bifurcations</b> .....	131
11.1	Stability in difference equations .....	131
11.1.1	The range $0 < r < 3$ .....	132
11.1.2	The range $3 < r < 3.45$ .....	133
11.1.3	The range $r > 3.45$ .....	136
11.2	The <i>Doctor Who</i> effect .....	137
11.3	Lab work .....	137
11.3.1	Exercises .....	138
<hr/>		
<b>II</b>	<b>Advanced material</b>	
<hr/>		
<b>12</b>	<b>More advanced epidemic models</b> .....	141
12.1	The infection rate .....	141
12.2	Demography .....	143
12.3	The effects of media .....	146
12.4	Hospital bed capacity .....	147
12.5	Lab work .....	148
12.5.1	Exercises .....	151
<b>13</b>	<b>Measles with vaccination</b> .....	155
13.1	The model .....	155
13.2	Finding equilibria .....	156
13.3	Stability in a discrete model .....	157
13.3.1	Stability in one dimension .....	158
13.3.2	Stability in two dimensions .....	158
13.4	Lab work .....	161
13.4.1	Exercises .....	163

<b>14</b>	<b>A disease with an asymptomatic class</b>	167
14.1	Asymptomatic infection	167
14.1.1	Using the characteristic polynomial	168
14.1.2	Using the next-generation method	171
14.2	Lab work	172
14.2.1	Exercises	172
<b>15</b>	<b>Impulsive Differential Equations</b>	175
15.1	Introduction	175
15.1.1	Fixed-time impulse example	175
15.1.2	Nonfixed-time example	178
15.2	Motivation	180
15.3	Impulsive semidynamical systems	181
15.3.1	Existence of solutions	185
15.3.2	Definitions of stability	185
15.3.3	Autonomous systems with impulsive effect	186
15.4	Floquet Theory in $\mathbb{R}^2$	188
15.4.1	Floquet Theory for continuous systems	188
15.4.2	Floquet theory	188
15.4.3	Orbital stability in $\mathbb{R}^2$	191
15.5	Lab work	195

---

### III Case studies

---

<b>16</b>	<b>Application: AIDS and end-stage renal disease</b>	201
16.1	Determining AIDS prevalence	202
16.2	Determining end-stage renal disease prevalence	205
16.3	Model fitting	209
16.4	Using the model to predict future outcomes	210
16.5	Lab work	212
16.5.1	Exercises	212
<b>17</b>	<b>Application: Malaria with a time delay</b>	215
17.1	A delay differential equation model of malaria	215
17.2	Lab work	219
17.2.1	Exercises	219
<b>18</b>	<b>Application: Guinea-worm disease</b>	223
18.1	Introduction	223
18.2	The model	224
18.3	The system without impulses	225
18.4	The system with impulses	227
18.4.1	Fixed chlorination	228
18.4.2	Nonfixed chlorination	229

18.5	Numerical simulations	230
18.6	Discussion	234
18.7	Lab work	235
<b>19</b>	<b>Application: Zombies! (Aargh!)</b>	<b>239</b>
19.1	Introduction — of peril!	239
19.2	The model — of doom!	240
19.3	Analysis — of anguish!	241
19.4	Incubation — of destiny!	243
19.5	Quarantine — of terror!	245
19.6	A cure — of fear!	248
19.7	Using our braaaiinnss! (impulsively)	250
19.8	Discussion — of dread!	251
19.9	Lab work — of horror!	252

---

## IV Appendices

---

Solving the time series directly	256
Partial fractions	259
Eigenvalues	260
The $R_0$ sleight of hand	262
Finding eigenvalues for the case of permanent immunity	264
Integrating factors	266
Trivial solutions for nonnegative constants	268
Taylor's Theorem	271
Stability of periodic orbits in the logistic equation	273
One-dimensional discrete stability condition	275
The lower bound for $\lambda_5$	277
Solving the end-stage renal disease equations	279
<b>Matlab overview</b>	<b>281</b>
M.1 Variables and operators	281
M.2 M-Files	282
M.3 Figures	283
M.4 Loops	284

M.5 Solving ODEs .....	285
M.6 Solving delay differential equations .....	285
M.7 Glossary of other terms .....	286
<b>References</b> .....	<b>287</b>
<b>Index</b> .....	<b>291</b>
