|          |                                                                                                                     |     |
|----------|---------------------------------------------------------------------------------------------------------------------|-----|
| <b>1</b> | <b>Auxiliary Materials</b> . . . . .                                                                                | 1   |
| 1.1      | Functional spaces and embedding theorems . . . . .                                                                  | 1   |
| 1.2      | Linear Elliptic Boundary value problems . . . . .                                                                   | 4   |
| 1.3      | Superposition operators . . . . .                                                                                   | 9   |
| 1.4      | Linear Riemann-Hilbert Problems . . . . .                                                                           | 15  |
| 1.5      | Degree Theory in Finite Dimensional Spaces . . . . .                                                                | 20  |
| <b>2</b> | <b>Pseudodifferential operators with continuous symbols in the space of sufficiently smooth functions</b> . . . . . | 25  |
| 2.1      | Pseudodifferential operators. Definitions and examples . . . . .                                                    | 25  |
| 2.2      | Algebra of a pseudodifferential operator. . . . .                                                                   | 33  |
| 2.3      | “Boundedness” of pseudodifferential operators with continuous symbol in Sobolev spaces. . . . .                     | 37  |
| 2.4      | Bundle structure in the algebra of pseudodifferential operators . . . . .                                           | 41  |
| <b>3</b> | <b><math>F - QR</math> structures associated with nonlinear maps.</b> . . . . .                                     | 47  |
| 3.1      | Quasiruled Fredholm mappings between Banach spaces. . . . .                                                         | 47  |
| 3.2      | A quasilinear Fredholm map between Banach spaces . . . . .                                                          | 61  |
| 3.3      | $F_s - QR$ maps between quasi-ruled Fredholm Banach manifolds . . . . .                                             | 77  |
| <b>4</b> | <b>Degree theory for nonlinear maps associated with <math>F - QR</math> structures</b> . . . . .                    | 89  |
| 4.1      | Paradoxical examples . . . . .                                                                                      | 89  |
| 4.2      | Degree theory for quasiruled Fredholm ( $F - QR$ ) mapping . . . . .                                                | 97  |
| 4.3      | Degree theory for quasiruled Fredholm map on quasicylindric domains . . . . .                                       | 101 |
| 4.4      | Degree theory between Banach manifolds associated with ( $F - QR$ ) structures . . . . .                            | 108 |

|          |                                                                                                           |     |
|----------|-----------------------------------------------------------------------------------------------------------|-----|
| <b>5</b> | <b>Global existence theorem of solutions of the nonlinear Riemann-Hilbert problems</b> .....              | 115 |
| 5.1      | Orientable and non-orientable Riemann-Hilbert problems and CW structures .....                            | 119 |
| 5.2      | The Orientable Riemann-Hilbert problem .....                                                              | 120 |
| 5.3      | Non-orientable Riemann-Hilbert problem .....                                                              | 128 |
| 5.4      | Nonlinear Riemann-Hilbert Problems with Lipschitz Continuous Boundary Conditions .....                    | 131 |
| 5.5      | $L^p$ -estimates for the solutions of linear Riemann-Hilbert problem with measurable coefficients .....   | 132 |
| 5.6      | Nonlinear Riemann-Hilbert Problems .....                                                                  | 134 |
| 5.7      | Nonlinear Riemann-Hilbert problems for multiply connected domains (closed boundary data) .....            | 136 |
| 5.8      | Nonlinear Riemann-Hilbert problem for multiply connected domains (non-closed boundary data) .....         | 148 |
| 5.9      | The (F-QR)-property of the mapping $A_H$ .....                                                            | 153 |
| 5.10     | A priori estimate for solutions of the equation $A_H(\omega, \mu) = g$ ..                                 | 157 |
| 5.11     | Nonlinear Riemann-Hilbert Problems without Transversality ..                                              | 163 |
| 5.12     | Formulation of the Problem and Reduction to Nonlinear Singular Integral Equations .....                   | 164 |
| 5.13     | A-priori Estimates for the Solution .....                                                                 | 171 |
| <b>6</b> | <b>Integer-valued homotopy invariant degree for certain classes of quasiruled Fredholm mappings</b> ..... | 177 |
| 6.1      | Orientation in the functional space .....                                                                 | 177 |
| 6.2      | Integer valued degree for nonlinear elliptic $\Psi$ DO. ....                                              | 182 |
|          | <b>References</b> .....                                                                                   | 195 |
|          | <b>Index</b> .....                                                                                        | 203 |
